Pediatric Therapy Partners specializes in the treatment of children with Sensory Processing Disorder (SPD) and other conditions that include sensory challenges. Occupational Therapists, Physical Therapists and Speech Language Pathologists use a child centered, child-directed, relationship-based approach to treatment. Working in conjunction with parents, caregivers and others involved in a child's life, our goal is to educate and empower children and their families to promote optimal progress and development.

Therapy intervention using a sensory integrative approach is fun! The clinic looks like a big playground which draws the child in. Treatment is provided in the context of play, and uses the child's interests and motivations to obtain optimal engagement in therapy. Intervention is based on the unique needs of each child and family.
